

PROFESSIONAL SUMMARY

Business-minded Data Engineer experienced in building scalable, cloud-based data systems. With a background spanning finance, operations, logistics, international trade, and sales, I ground data solutions in business context. I prioritize scalability, reliability, and data integrity when building data models and pipelines, transforming raw operational data into actionable business assets.

Interested in leveraging modern data stack tooling, cloud infrastructure, and AI-enabled workflows, I’m drawn to organizations that share the same focus. Open to relocation.

TECH STACK / SKILLS

Data Engineering	ETL/ELT, PostgreSQL, Data Modeling, Database Architecture, Query Optimization, SQLAlchemy
Cloud / AWS	IAM, RDS, EC2, ECR, ECS, S3
Orchestration / DevOps	Apache Airflow, Docker, Git/GitHub
Programming	SQL, Python
Analytics / BI	Looker, QuickBase, Excel
Professional Skills	Stakeholder Communication, Collaboration, Adaptability, Leadership, Mentorship, Agile / Scrum

RELEVANT EXPERIENCE

Independent Data Consultant	Atlanta, GA
Textile Importer & Distributor	Jun 2024–Nov 2025

- Textile company managing vendor sourcing, container logistics, and order fulfillment across international supply chains.
- Modernized fragmented Excel-based workflows by designing and building a centralized PostgreSQL data system on AWS RDS, consolidating order, shipment, and financial data into a single source of truth for logistics, cost, and profitability analysis.
 - Reduced the average days late among late shipments by 11 days, improved container space utilization by 18%, and substantially reduced manual reconciliation and redundant workstreams.
 - Partnered with stakeholders across sales, operations, finance, and logistics to understand business needs, troubleshoot data issues, and support high-severity incidents with clear communication and documentation.
 - Built and maintained hybrid ELT/ETL pipelines using Python and Apache Airflow to automate extraction, loading, and transformation of data, archiving raw source files to AWS S3 for auditability.
 - Enforced data integrity through pipeline-level validation checks and database-level constraints, functions, and triggers to ensure expected data types and value ranges.
 - Developed analytics-ready SQL views for container utilization, on-time vs. promised delivery, and profit margin by container and order.
 - Integrated QuickBooks Enterprise on AWS WorkSpaces for centralized financial data access and configured AWS S3 for automated file backups.

DC Public Charter School Board	Washington, D.C.
Data Engineer	Oct 2021–Nov 2023

- Sole charter school authorizer in Washington, D.C., providing academic and financial oversight across 60+ nonprofit organizations operating 130+ schools serving over 47,000 students.
- Collaborated with stakeholders across School Performance, Operations, and Finance, while working closely with analytics and data engineers to deliver tailored data solutions supporting charter school accountability, renewal, and oversight decisions.

- Developed and maintained Python-based ETL pipelines on AWS EC2, orchestrated with Apache Airflow, to automate extraction, transformation, and loading of organizational datasets; monitored and troubleshoot DAGs to maintain pipeline reliability.
- Improved ETL pipeline runtime by up to 80% through SQL optimization, reducing memory usage and operational costs.
- Designed and managed 100+ normalized PostgreSQL data models to support consistent, scalable reporting.
- Built Looker and QuickBase dashboards to provide stakeholders with clearer visibility into performance, operations, and reporting metrics across the organization.
- Served as Scrum Master, facilitating sprint planning, daily scrums, sprint reviews, and retrospectives to drive timely project delivery.
- Mentored and onboarded new analytics engineers on the team's technology stack and troubleshooting practices.

EDUCATION

Data Engineer Camp (DEC), Australia	<i>Data Engineer Fellow - 2024</i>
Flatiron School , New York, NY	<i>Data Science Fellow - 2021</i>
University of Georgia , Athens, GA	<i>Bachelor of Science, Finance - 2011</i>

INTERESTS

-
- Hobbies: Rock climbing, salsa dancing, golf, cricket, hiking/camping.
 - AI & Automation: Exploring AI integration into data pipelines and workflows to automate processes.
 - Modern Data Stack: Learning emerging tools, platforms, and best practices in the modern data engineering ecosystem.

PROFESSIONAL DEVELOPMENT / CAREER BREAK

Dec 2025–Present

-
- **Family Care & Continuous Upskilling:** Stepped away from full-time roles to provide essential family support while actively maintaining technical proficiency through self-directed learning and applied builds.
 - **Project Focus:** Completed a Dockerized PostgreSQL portfolio project focused on database design, data modeling, Python-based data generation, and deployment readiness | github.com/Ozxahmed/abc_store
 - **Modern Tooling Architecture:** Currently building additional portfolio projects utilizing Snowflake, dbt, Databricks, and AI-enabled workflows to gain hands-on experience with the modern cloud data stack.
 - Dividend Stocks Portfolio | github.com/Ozxahmed/dividend_stock_portfolio (in progress)
 - Option Trading Metrics | (in progress)
